

To King County regarding potential On Site Septic System Policy/Fee changes.

I live in rural Woodinville and attended one of the meetings King County held to solicit citizen feedback on your proposed On Site Septic System changes/implementations/fees. At this meeting King County, not surprisingly:

- could not detail any significant facts related to where the alleged Septic leakage occurs, if any
- could not provide a count of how many Septic Systems have failed
- could not provide any data regarding if the same citizens Septic Systems were/are repeat offenders
- did not appear to be receptive to Citizens self-testing of On Site Septic Systems
- did not seem to comprehend they, King County, had been responsible for several millions of gallons of raw waste being put into Puget Sound, and that they, King County, should focus their efforts, first and foremost upon those ecological disasters, before coming after Citizens, who King County cannot prove have any problems what so ever
- Therefore, King County, please clean up your own house first
- Then, and only then, provide ALL the relevant data above and publish it for all to see, so our most ardent hope may be met, i.e. an intelligent, focused, rational plan may be developed, for whatever the data tells us the real problem to be solved is.

Thank you for your consideration. Please note: we Citizens are being infinitely more polite and considerate of you, than you are of us.

Sincerely,

Warren Berger
